

# MB-77HS HI

Lift and slide balcony door with enhanced thermal insulation

---

The MB-77HS HI lift and sliding balcony door with a thermal barrier system is used to make elements for external architectonic development, which are characterized by high thermal and acoustic insulation as well as water- and air-tightness. This system meets all energy saving and environmental requirements. The parameters of the door, which consists of MB-77HS HI system elements exceed the requirements of even the strictest applicable regulations and standards.

## Features of MB-77HS HI system
